CASE STUDY

MID RCA OCCLUSION
BTG CenterCross™

Target Lesion
Mid RCA, 30mm occlusion

Methodology
BTG CenterCross™ anchoring catheter preloaded with a Turnpike™ spiral microcatheter and Prowater™ guidewire. BTG CenterCross™ scaffold deployed at the proximal cap and Pilot™ 200 penetrated and advanced into the true lumen. Distal cap was crossed with a Gaia™ 2nd wire and RCA was revascularized with 3.5 x 33mm DES.

Crossing Time
6 minutes

INDICATIONS:
FDA Clearance: The CenterCross™ Catheter is intended to be used in conjunction with steerable guidewires to access discrete regions of the coronary and peripheral vasculature. It may be used to facilitate placement and exchange of guidewires and other interventional devices. The CenterCross™ ULTRA Catheter is intended to be used in conjunction with steerable guidewires to access discrete regions of the coronary and peripheral vasculature. It may be used to facilitate placement and exchange of guidewires and other interventional devices. The MultiCross™ Support Catheter is intended to be used in conjunction with steerable guidewires to access discrete regions of the coronary or peripheral vasculature and for guidewire exchange. The MicroCross™ Catheter is intended for use as a conduit for the exchange/support of guidewires in the peripheral and coronary vasculature. The MicroCross™ Catheter is also intended to infuse and deliver saline and contrast agents.
CE Mark: The CenterCross™ Catheter is intended to be used in conjunction with steerable guidewires to access discrete regions of the coronary and peripheral vasculature. It may be used to facilitate placement and exchange of guidewires and other interventional devices beyond stenotic lesions, including chronic total occlusions (CTOs). The CenterCross™ ULTRA Catheter is intended to be used in conjunction with steerable guidewires to access discrete regions of the coronary and peripheral vasculature. It may be used to facilitate placement and exchange of guidewires and other interventional devices beyond stenotic lesions, including chronic total occlusions (CTOs). The MultiCross™ Support Catheter is intended to be used in conjunction with steerable guidewires to access discrete regions of the coronary or peripheral vasculature and for guidewire exchange beyond stenotic lesions, including chronic total occlusions (CTOs). The MicroCross™ Catheter is intended for use as a conduit for the exchange/support of guidewires in the peripheral and coronary vasculature. The MicroCross™ Catheter is also intended to infuse and deliver saline and contrast agents.
Caution: Federal (U.S.) law restricts this device to sale by or on the order of a physician.
