CASE STUDY

MID-LAD OCCLUSION

BTG MultiCross™

Target Lesion
Mid-LAD, 35mm occlusion

Methodology
BTG MultiCross™ anchoring catheter used to provide anchoring support during LAD lesion access while mitigating guidewire deflection into the adjacent Diagonal. With the Diagonal wired through the BTG MultiCross™ Red lumen, the top Blue lumen was used to access and successfully cross the LAD occlusion.

Crossing Time
3 minutes

INDICATIONS:
FDA Clearance: The CenterCross™ Catheter is intended to be used in conjunction with steerable guidewires to access discrete regions of the coronary and peripheral vasculature. It may be used to facilitate placement and exchange of guidewires and other interventional devices. The CenterCross™ ULTRA Catheter is intended to be used in conjunction with steerable guidewires to access discrete regions of the coronary and peripheral vasculature. It may be used to facilitate placement and exchange of guidewires and other interventional devices. The MultiCross™ Support Catheter is intended to be used in conjunction with steerable guidewires to access discrete regions of the coronary and peripheral vasculature and to mitigate guidewire deflection into adjacent vasculature. It may be used to facilitate placement and exchange of guidewires and other interventional devices beyond stenotic lesions, including chronic total occlusions (CTOs). The MicroCross™ Catheter is intended for use as a conduit for the exchange/support of guidewires in the peripheral and coronary vasculatures. The MicroCross™ Catheter is also intended to infuse and deliver saline and contrast agents.

CE Mark: The CenterCross™ Catheter is intended to be used in conjunction with steerable guidewires to access discrete regions of the coronary and peripheral vasculature. It may be used to facilitate placement and exchange of guidewires and other interventional devices beyond stenotic lesions, including chronic total occlusions (CTOs). The MultiCross™ Support Catheter is intended to be used in conjunction with steerable guidewires to access discrete regions of the coronary and peripheral vasculature and to mitigate guidewire deflection into adjacent vasculature. It may be used to facilitate placement and exchange of guidewires and other interventional devices beyond stenotic lesions, including chronic total occlusions (CTOs). The MicroCross™ Catheter is intended for use as a conduit for the exchange/support of guidewires in the peripheral and coronary vasculatures. The MicroCross™ Catheter is also intended to infuse and deliver saline and contrast agents.

Caution: Federal (U.S.) law restricts this device to sale by or on the order of a physician.
